

Pipe Ten Unmanaged Solution

The unmanaged solutions are ideal for users who have the time and experience to manage a dedicated solution and require excellent network, power and hardware support.

Power

Pipe Ten's unmanaged solutions are built to your specifications. Popular configurations are Intel Xeon or AMD Opteron with 512MB RAM or more and SATA hard disk drives however any specification you may require can be provided.

Cost

As Pipe Ten are only responsible for maintaining the network, power and hardware availability it allows you to benefit from reduced costs.

Monitoring

The network and all dedicated servers are monitored 24 hours a day.

Flexibility

With all Pipe Ten's solutions you get the flexibility you require. For a dual processor capable machine giving future expansion or an additional server for hot fail-over capability it can all be accommodated.

Security

Use of Pipe Ten's shared firewall for dedicated solution customers is provided and dedicated and hot fail-over firewall options are also available.

Support

An unmanaged server doesn't come without support. Pipe Ten's experienced engineering team is on hand 24/7 for any problems you may encounter.

Installation

The standard installation includes the building and placement of the server in your data center of choice, operating system and any additional agreed software and configuration of any IP addresses assigned.

Choice

A selection of operating systems and software is available, Pipe Ten are licensed under the Microsoft SPLA scheme and very experienced in all flavours of Linux and Unix.

Control

Provide your own control panel software or choose from a selection of approved software.

Service Level Agreement

Pipe Ten provides a comprehensive SLA which includes the provision for substantial compensation for failure to meet the standards set within the SLA so the you can be assured of a good home for your application.
